# GROUP COURSE MATERIAL OPTIONS

When to "Group" an ISBN:

If you offer multiple options for students to choose from (textbook and Access Code with ebook Package, or Access Code with ebook standalone), use the "Course Materials Grouping" tool to combine options so students know they only have to buy ONE.

To group materials, first adopt all of the possible ISBNs to the course. Then, click "Course Materials Grouping," located under the search engine box.

The textbooks that were already added to the course will appear. You can then drag and drop the ISBNs that you want to include in the group. When students visit the bookstore website, they will see a drop-down arrow that shows them their different choices.

Tip: When grouping ISBNs, add a course note for students so they know they only need to purchase **one** version of the textbook.
